

## Use PEX Supplies for Chlorine Free Water Supply

The PEX water line form a crucial part of any kind of plumbing application. One of the important parts of these fittings is **PEX pipes**. These are metallic based units which are used for making connections between two or more PEX lines.

One PEX structure can be connected to another structure with the help of these units. Almost all such pieces are made with highly qualitative metals such as brass, copper and aluminum. Among them brass is considered the best! The **PEX tube** made with brass are used extensively in all plumbing methodologies to meet various kinds of requirements. If you will look out in market, then you will find that these units are available in different sizes such as 1", 3/4", 3/8", 1/2" and 5/8". These size variants can be used along with PEX tubing of different sizes so that an effective and long lasting water supply system can be obtained.
